

Technical Data Sheet

Lithium Tetrafluoroborate: LITHIUM TETRAFLUOROBORATE
Formula: LiBF ₄
Relative weight: 93.75
CAS NO.: 14283-07-9
Physical Chemical Properties: An inorganic compound with its chemical formula LiBF ₄ . It is an odorless white crystalline powder; its molecular weight is 93.75, density 0.852g/cm ³ , melting point 296.5°C (565.7°F; 569.6K). It is hygroscopic and very soluble in water. It has been extensively tested for use in commercial secondary batteries, an application that exploits its high solubility in nonpolar solvents.
Applications: As an electrolyte in lithium-ion batteries, LiBF ₄ offers some advantages relative to the more common LiPF ₆ . It exhibits greater thermal stability and moisture tolerance. For example, LiBF ₄ can tolerate a moisture content up to 620 ppm at room temperature whereas LiPF ₆ readily hydrolyzes into toxic POF ₃ and HF gases, often destroying the battery's electrode materials. Disadvantages of the electrolyte include a relatively low conductivity and difficulties forming a stable solid electrolyte interface with graphite electrodes.

Name		Lithium Tetrafluoroborate
LiBF ₄ Content (Min%)		99.90%
Impurity Content Max ppm	H ₂ O	300
	HF	200
	Insoluble content in DME	1000
	Na ⁺	5
	K ⁺	20
	Ca	50
	Fe	10
Packing: 10~20kg/Sealed aluminum pouch; 120kg ~ 150kg/Stainless steel drum.
